Accu-Lock System

BARSKA's Accu-Lock System utilizes a coil spring positioned within the scope to securely lock the inner tube. This coil positioning system allows the scope to stay locked dead-on to the target shot after shot and minimizes the zero maintenance of the scope for pinpoint accuracy (See image). It is not necessary to adjust the Accu-Lock System manually and NO ADJUSTMENT KEY IS REQUIRED. Once you have zeroed your scope using the windage and elevation adjustments, the scope will maintain the zero setting until it is necessary for you to re-adjust the scope.
